

textured effects

Europolveri developed this new "TEXTURED EFFECTS" folder to supply an updated working instrument to its customers, giving them the chance to take decisions easily and quickly.

The presented products are all available in stock, but please take note that there are many other products, already formulated, we can provide you in a short time.

To allow a more realistic vision and perception of the textured effect and colours, Europolveri has produced this folder, directly applying its powder coatings to aluminium panels; however, it must be specified that the colours in this folder should not be considered as reference masters, being the final appearance in terms of colour, surface finishing and gloss level depending on the type of surface, curing and application conditions.

The "TEXTURED EFFECTS" folder is divided into two fundamental product series:

PURAL - polyester powder coatings based on TGIC free for external use;

DURPOL - epoxy polyester powder coatings for internal use.

A detailed legend is also provided to identify all product specifications.

For more information please refer to Technical Data Sheet or directly contact Europolveri's technical assistance service.

effetti bucciati

Europolveri ha studiato questa nuova cartella "EFFETTI BUCCIATI", per fornire un aggiornato strumento di lavoro alla propria clientela, con l'intento di rendere più agevoli e veloci le scelte.

I prodotti presentati sono tutti disponibili a magazzino, ma vogliamo ricordare che ne esistono molti altri, già formulati, e quindi velocemente riproducibili.

Allo scopo di consentire una più realistica visione e percezione dell'effetto bucciato e del tono cromatico, Europolveri ha realizzato la presente cartella applicando le proprie vernici in polvere su pannelli di alluminio; va precisato comunque, che le tinte della presente cartella non sono da considerare come master di riferimento in quanto, al variare del supporto e delle condizioni di applicazione e polimerizzazione, anche l'aspetto finale in termini di tono cromatico, di finitura superficiale e di grado di brillantezza può cambiare.

La cartella "EFFETTI BUCCIATI" è suddivisa in due fondamentali tipologie di prodotti:

- serie PURAL, vernici in polvere a base di poliestere TGIC free per esterno;

- serie DURPOL, vernici in polvere a base epossipoliestere per interno.

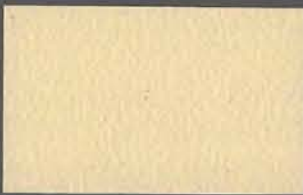

Una dettagliata legenda consente inoltre di individuare tutte le caratteristiche del prodotto. Per più dettagliate informazioni si consiglia di consultare la scheda tecnica prodotto o di rivolgersi al servizio assistenza tecnica Europolveri.
